Notes1: Money lending business etc. are non-deposit money corporations, including lending and credit card business.

^{2:} Financial products transaction dealers are those engaged in Type I Financial products transaction and limited to those engaged in Securities-Related Business.

^{3:} Futures commodity transaction dealers etc. are futures commodity transaction dealers, investment advisory and agent services, investment management services, and auxiliaries for financial products transaction.

^{4: *:} Can not be compared because of the negative figure in the previous year.

About Seasonal Adjustment

- (i) The final seasonally adjusted series are estimated by using the X-12-ARIMA program (2002) (Version 0.2.10) developed by the U.S. Census Bureau.
- (ii) In the RegARIMA models the order of differences and seasonal differences are fixed as 1. Other parameters in the ARIMA part are chosen by minimizing AIC values with the restriction that they are not greater than the 2nd order. The effects of VAT are estimated by using variables AO's in RegARIMA modeling.

(iii)Specs

| | | RegARIMA model | The adjustment of VAT |
|----------------------|----------------------------------|--------------------------|------------------------|
| Sales | Manufacturing Non-manufacturing | (110)(212) (010)(110) | not adapted adapted |
| Ordinary profits | Manufacturing Non-manufacturing | (110)(011) (212)(011) | not adapted |
| Investment in P&E | Manufacturing Non-manufacturing | (112)(012) (012)(112) | not adapted |

Notes: Non-Manufacturing doesn't include Finance and Insurance.

The seasonally adjusted series are estimated by using log-transformed series. But the seasonally adjusted series of Ordinary profits of Manufacturing is estimated by applying additive seasonal decomposition to no-transformed original series, because the value of this series in Jan.-Mar.2009 is negative. Also, the seasonally adjusted series of Ordinary profits of Non-Manufacturing is estimated by the same method since April.-June., 2009. On the influence of the Lehman shock, In some series that adopted seasonal adjustment, unusual fluctuations caused by the "Lehman shock" was observed. On this account, on use of X-12-ARIMA, we examined introduction of some dummy variables which express level shift, but decided not to change the seasonal adjustment method at present because it was recognized that the influence on final seasonally adjusted series was comparatively small. But we continue to examine validity, and plan to change the seasonal adjustment method if necessary.
