Notes1: Money lending business etc. are non-deposit money corporations, including lending and credit card business.

^{2:} Financial products transaction dealers are those engaged in Type I Financial products transaction and limited to those engaged in Securities-Related Business.

^{3:} Futures commodity transaction dealers etc. are futures commodity transaction dealers, investment advisory and agent services, investment management services and auxiliaries for financial products transaction.

^{4: *:} Can not be compared because of the negative figure in the previous year.

Seasonal Adjustment on "Quarterly Financial Statements Statistics of Corporations by Industry"

1. Seasonal Adjustment

(i) Seasonal Adjustment on "Financial Statements Statistics of Corporations by Industry"

Seasonally adjusted series are estimated by using the X-12-ARIMA program(2002)(Version 0.2.10) that is developed by the U.S. Department of Commerce, Census Bureau.

(ii) Selection of RegARIMA Model

In the RegARIMA models of X-12-ARIMA, the order of differences and seasonal differences are fixed as 1. The order of other parameters are chosen by minimizing AIC (Akaike Information Criterion). Since October-December 2011, the assumption for stabilizing seasonally adjusted values is used in addition to above-mentioned assumptions. (http://www.mof.go.jp/pri/reference/ssc/haikei.html)

(iii) Selected RegARIMA Model

Following specs are used in each item.

		ARIMA model	Applied type and term to change points and outliers
	Manufacturing	(2 1 2) (2 1 0)	rp2008.2-2009.2 , rp2009.2-2010.1
Sales	N	(0 1 2) (1 1 0)	ao1989.1 , ao1989.2 , ao1997.1
	Non-manufacturing		rp2008.3-2009.1 , rp2009.1-2010.2
Ondinom	Manufacturing	(0 1 0) (0 1 1)	rp2008.3-2009.1 , rp2009.1-2010.1
Ordinary profits	Non-manufo atumina	(2 1 2) (1 1 1)	ao1989.1 , ao1989.2 , ao1997.1
profits	Non-manufacturing		$rp2008.2 \hbox{-} 2009.1 \ , \ rp2009.1 \hbox{-} 2010.2$
Investment	Manufacturing	$(1\ 1\ 2)\ (1\ 1\ 2)$	rp2008.3-2009.1 , rp2009.1-2009.4
in P&E	Non-manufacturing	(1 1 0) (1 1 2)	rp2008.2-2009.2 , rp2009.2-2010.2

From analysis on change points and outliers, the influences of consumption tax reforms are reflected as additive outliers(ao) during January-June 1989 and January-March 1997 in sales and ordinary profits of non-manufacturing. The influence of Lehman's fall is reflected as ramps(rp) because big change happens and continues during several terms since Autumn 2008. Day effects are not reflected. Data is since April-June 1985. Forecasting term is 4 quarters, i.e. a year.

2. Items Applying Seasonal Adjustment

- (i) Applied items are sales, ordinary profits and investment in P&E.
- (ii) Industry sectors are overall industry, manufacturing and non-manufacturing. Scale of capital is only overall scale. Seasonally adjusted values of overall industry are estimated by summing seasonally adjusted values of manufacturing and ones of non-manufacturing.

Notice: Finance and insurance industry is not included in overall industry and non-manufacturing.

3. Publication of Seasonally Adjusted Percentage Change from Previous Quarter

Seasonally adjusted percentage change from previous quarter is published in each quarter. It is estimated by adding updated data and using RegARIMA model. Former seasonally adjusted percentage change from previous quarter is revised in each publication.

Revision of model for validity is examined annually.

4. Seasonal Adjustment on ordinary profits

Seasonally adjusted series are estimated by using multiplicative type of calculation method for making seasonal index and converting original series to logarithm. But, seasonally adjusted series on ordinary profits of manufacturing are estimated by using additive type of calculation without converting to logarithm since January-March 2009 because the original series is negative. Accordingly, seasonally adjusted series on ordinary profits of non-manufacturing are estimated by using additive type of calculation without converting to logarithm since April-June 2009.

5.Influence of the Great East Japan Earthquake

At this time, it is difficult to measure the influence of the Great East Japan Earthquake because data is not enough. Therefore, any treatment for such an influence, i.e. ramps etc. is not used. But, validity of model will be examined with accumulating data.
