1. Seasonal Adjustment
(i) Seasonal Adjustment on "Financial Statements Statistics of Corporations by Industry"

Seasonally adjusted series are estimated by using the X-12-ARIMA program(2002)(Version 0.2 .10 ) that is developed by the U.S. Department of Commerce, Census Bureau.
(ii) Selection of RegARIMA Model

In the RegARIMA models of X-12-ARIMA, the order of differences and seasonal differences are fixed as 1 . The order of other parameters are chosen by minimizing AIC (Akaike Information
Criterion). Since October-December 2011, the assumption for stabilizing seasonally adjusted values is used in addition to above-mentioned assumptions.
(iii) Selected RegARIMA Model

Following specs are used in each item.

As a result analyzing on changing points and outliers in this statistics, the effect of the consumption tax has been eliminated by taking in additive outliers (ao) in Jan-Mar 1989, Apr-Jun 1989, Jan-Mar 1997, Apr-Jun 1997, Jan-Mar 2014 and Apr-Jun 2014. The effect of the Great Financial Crisis has been eliminated by taking in ramps (rp) due to the continuing fluctuation over several quarters after Autumn 2008. Additive outliers (ao) in Apr-Jun 2011 have been taken in to eliminate temporary special change in sales of manufacturing and non-manufacturing, operating profits of manufacturing and non-manufacturing, investment in P\&E (excluding investment in software) of manufacturing caused by the Great East Japan Earthquake. The effect of COVID-19 has been eliminated by using ramps (rp) in sales, operating profits and ordinary profits each point of Jan-Mar 2020, Apr-Jun 2020 and Oct-Dec 2020 . The day of week effect and leap year effect have not been eliminated. The data from April-June 1985 to the latest quarter is used in this statistics and the forecasting period is set during four quarters from the latest.
2. Items Applying Seasonal Adjustment
( i ) Applied items are sales, operating profits, ordinary profits, investment in P\&E (excluding investment in software), investment in software and investment in P\&E (including investment in software). Seasonally adjusted values of investment in P\&E (including investment in software) are estimated by summing seasonally adjusted values of investment in P\&E (excluding investment in software) and ones of investment in software.
( ii ) Industry sectors are overall industry, manufacturing and non-manufacturing. Scale of capital is only overall scale. Seasonally adjusted values of overall industry are estimated by summing seasonally adjusted values of manufacturing and ones of non-manufacturing.

Notice: Finance and insurance industry is not included in overall industry and non-manufacturing.
3. Publication of Seasonally Adjusted Percentage Change from Previous Quarter

Seasonally adjusted percentage change from previous quarter is published in each quarter. It is estimated by adding updated data and using RegARIMA model. Former seasonally adjusted percentage change from previous quarter is revised in each publication.
Revision of model for validity is examined annually.
4. Seasonal Adjustment on ordinary profits and operating profits

Seasonally adjusted series are estimated by using multiplicative type of calculation method for making seasonal index and converting original series to logarithm. But, seasonally adjusted series on ordinary profits of manufacturing are estimated by using additive type of calculation without converting to logarithm since January-March 2009 because the original series is negative. Accordingly, seasonally adjusted series on ordinary profits of non-manufacturing are estimated by using additive type of calculation without converting to logarithm since April-June 2009 .

Seasonally adjusted series on operating profits which started publication in April-June 2016 are estimated by using additive type of calculation.
