

# 2. Learn about "Tax" Situations

## 1 Various Taxes

There are several ways to categorize taxes. Firstly, taxes may be categorized by **targets taxes are imposed on**. Roughly, there are taxes on income, consumption, and assets.

Secondly, taxes are categorized by **who imposes taxes on**. Taxes imposed by the national government are called national tax, while taxes imposed by prefectural or municipal governments are called local tax. There are more than 40 national or local taxes stipulated by law.

Taxes may also be classified by **who bears the tax (effective tax contributor) and who pays the tax (taxpayer)**. There are direct taxes such as income tax, for which the taxpayer is identical to the effective tax contributor, and indirect taxes such as consumption tax, for which the taxpayer differs from the effective tax contributor.

Tax on Income Income Taxation	Tax on Consumption Consumption Taxation	Tax on Assets Property Taxation
<b>Income tax, corporation tax, inhabitant tax, etc.</b>	<b>Consumption tax, liquor tax, tobacco tax, gasoline tax, etc.</b>	<b>Inheritance tax, gift tax, registration and license tax, etc.</b>
The income tax, corporation tax and other taxes that are imposed on income (profit)	The consumption tax and other excise taxes that are levied on consumption of goods and services	The inheritance, fixed asset tax, and other asset taxes that are imposed on the acquisition and possession of assets

## 2 Japan's Tax Revenue

National tax revenues (general account) hit roughly 60 trillion yen in FY1990 during the bubble economy period. However, tax revenues later plunged due to stagnant economic conditions. In FY2009, national tax revenues dropped to about 39 trillion yen due to the Lehman Shock. An economic recovery, etc. led to increase in tax revenues, resulting in the tax revenues of 60.8 trillion yen as of FY2020.

### Trend of General Account Tax Revenues

Note) The data until FY2020 are on a settlement basis, the data of FY2021 is the revised budget, and the data of FY2022 is based on the budget.

### 3 Changes in the Tax System and Tax Item features

During the era of Heisei (January 1989 to April 2019), in order to create fairer tax burden in the entire tax system, the personal income tax rate was reduced and **consumption tax (3%) was established in 1989** to impose tax burden on consumption broadly with low- rate. This was the measures in response to the heavy burden of income tax during the late era of Showa (December 1926 to January 1989) and the diversification of consumption activities, etc.

Later, tax reforms were implemented with the pillars of reducing personal income taxation and changing consumption tax (including the local consumption tax) rate from 3% to 5% (in1997), considering the inevitable increase in the financial demand for social security, while the population of working generation has decreased relatively due to the acceleration of declining fertility and aging population.

In addition, under the initiative of Comprehensive Reforms of Social Security and Tax, the consumption tax has been considered **as the financial source of social security**, with the view to **share the cost by all generations which the large part of citizens would benefit**. As such, in 2014, the consumption tax rate was hiked from 5% to 8%, and **in October 2019, it was further hiked from 8% to 10%**. During this period, **the maximum tax rate of income tax has been revised** in order to restore the income redistribution function and **the structure of corporation taxation has been reformed to be more growth-oriented** by **"expanding the tax base while reducing the tax rate"** in order to maintain the vitality and international competitiveness of domestic companies.

As described, each of the tax categories has been revised to respond to the changes in social and economic situation.

The features of the main tax items are as follows in the table below.

	National Tax Revenue (Budget of FY2022)	Features
Income Tax	¥20.4 trillion	<ul style="list-style-type: none"> <li>• Tax burdens increase progressively according to the tax paying capacity.</li> <li>• Income tax is imposed mainly on the working generation.</li> <li>• Various deductions are devised to give fine-tuned considerations to individuals according to their conditions.</li> </ul>
Corporation Tax	¥13.3 trillion	<ul style="list-style-type: none"> <li>• Tax policy requires to be consistent with government's Growth Strategy and also considerations must be given to maintain and improve international competitiveness.</li> <li>• Various tax preferences to achieve certain policy goals are taken.</li> <li>• Tax revenues are relatively sensitive to economic conditions.</li> </ul>
Consumption Tax	¥21.6 trillion	<ul style="list-style-type: none"> <li>• Consumption tax burdens are shared widely by all citizens including elderly, instead of putting heavy burden on the working generation.</li> <li>• Consumption tax revenues are relatively stable irrespective of economic changes.</li> <li>• The impact on economic activities is relatively small.</li> </ul>
Inheritance Tax	¥2.6 trillion	<ul style="list-style-type: none"> <li>• It plays a role of preventing the gap between the rich and the poor from consolidating, so as to achieve the purpose of the redistribution of assets.</li> <li>• The tax is levied on the personnel holding some assets as the subjects.</li> </ul>

## 4 Fiscal Situation

In recent years, social security expenditure and national debt services (principal and interest payments on the government bond) have increased in national general account expenditures, while the proportion of other policy expenses has decreased. In recent budgets, **social security expenditure, national debt services, and local allocation tax grants account for about three-quarters of total expenditures.**

Tax revenue is estimated to be approximately 65.2 trillion yen in the FY2022 general account budget. Essentially, the government expenditure should be financed by the tax and other revenue in the same year, but the current revenue accounts for only about two-thirds of the whole expenditure in the FY2022 budget, and the rest one-third relies on the revenue from issuing government bond (i.e. debt).

### FY2022 Budget: General Account

(Note 1) Budget-based

(Note 2) The "Others" category of expenditure includes the reserve for measures against COVID-19 (4.6% (5.0 trillion yen)).

There is a large gap between general account expenditures and tax revenues, which has been financed by issuing **government bonds** (construction bonds and special deficit-financing bonds) as debt. **The burden has been postponed to the future generation.** In addition, expenditure is recently expanding due to the responses to the COVID-19. The current tax system has not been able to cover the increasing expenditure due to factors such as aging population, and has not adequately fulfilled its basic function of **fund raising**.

# 5 Balance of Benefits and Burdens

Compared with other countries, **the scale of current tax revenues in Japan is relatively low as a percentage of GDP**. As for expenditures, the scale of expenditure other than social security expenditure is relatively low in the world, but **the scale of social security expenditure is at a medium level**.

It is necessary to continue to discuss the relationship between the increase in social security benefits due to aging population, etc. and the public burden as a whole.
