Seasonal Adjustment

1. The final seasonally adjusted series are estimated by using the X-12-ARIMA program (2002) (Version 0.2.10) developed by the U.S. Census Bureau.

2. In the RegARIMA models the order of differences and seasonal differences are fixed as 1. Other parameters in the ARIMA part are chosen by minimizing AIC values with the restriction that they are not greater than the 2nd order. The effects of VAT are estimated by using variables AO's in RegARIMA modeling.

3. Specs

| | | RegARIMA model | Adjustment of VAT |
